

Title: EU climate policies and synergies with the CAP

Speaker: Valeria Forlin, European Commission, DG CLIMA

Text:

The EU 2030 Energy and Climate framework sets ambitious targets and all sectors, including agriculture and forestry, will be required to contribute. This framework recognizes that, while agriculture has achieved 21% reduction of emissions since 1990, decarbonisation in the sector should continue and carbon sequestration should be enhanced without affecting food security. The presentation will introduce this policy framework and focus on the data needed to underpin its implementation; it will also make a link to the future CAP and how it could support the transition to a climate-smart farming sector.
